

AIR ACE™

AdvanTac vest designs include a series of load bearing, multi-pocket utility vests with either the patented SnapTrack™ modular attachment system or MOLLE system, allowing for easy pocket reconfiguration to meet the demands of different missions and requirements.

MOLLE Vests

The Air Ace™ MOLLE Vest utilizes the same platform as the original Air Ace™, but with MOLLE attachment across the entire vest base, allowing for limitless pocket configurations.

AdvanTac has developed a variety of MOLLE pockets for maximum flexibility. Our MOLLE pockets are designed to integrate with our MOLLE vests, Ace Advantage™ Body Armor, and JSAVES™ vest and harness systems, as well as other MOLLE platforms.

The vest base comes in sizes Small and Regular/Large. Pocket sets are available in standard ACC and AMC configurations, as well as individually for custom configurations.

- Coyote pockets made with

HaloTech™ FR

meet NATICK approved infrared reflectance and fire-retardant standards

- Standard configurations or build a custom vest with over 40 pockets

- Available in Coyote and Black
