

AIR ACE™

Advantac vest designs include a series of load bearing, multi-pocket utility vests with either the patented SnapTrack™ modular attachment system or MOLLE system, allowing for easy pocket reconfiguration to meet the demands of different missions and requirements.

SnapTrack™ Vests

Air Ace™ vests designed with the modular SnapTrack™ system have been windblast tested at over 600 knots and ejection seat sled tested to Air Force standards. These vests have been developed to withstand extremes. Variations between the different pocket configurations for each vest center around mission specific requirements and command-level compliance.

Standard vest configurations are available for AMC, ACC, CCA/HAZMAT, FBI, SAR, Secret Service and Tactical Assault units. The vests integrate with all flight clothing, extraction harnesses, parachutes and chemical warfare ensembles.

SNAPTRACK™
MODULAR ATTACHMENT SYSTEM

- Patented SnapTrack™ system has been windblast-tested to 600 knots
- Coyote pockets made with **HaloTech.FR** meet NATICK approved infrared reflectance and fire-retardant standards
- U.S. Air Force Safe-to-Fly Approval
- Standard configurations or build a custom vest with over 40 pockets
- Available in Coyote and Black
